/note="Vector: pTT7D=Pac (Pharmacia) with a modified polylinker; Site\_1: Not I; Site\_2: Eco RI; The UI-R-C3 library is a subtracted library of a series, ultimately derived from a mixture of individually tagged normalized libraries from rat placenta, adult lung, brain, liver, kidney, heart, spleen, ovary, muscle, and B, 12 and 18-day embryos, after a series of subtractions to reduce the representation of CDNAs from which ESTS had already been generated. The following serially subtracted libraries were generated in this process: UI-R-C3, UI-R-C2P, UI-R-C4, UI-R-C0, UI-R-C1, UI-R-C1, UI-R-C1, UI-R-C1, UI-R-C1, UI-R-C3, UI-R-C3, UI-R-C3, UI-R-C3, UI-R-C3, UI-R-C3, UI-R-C3, UI-R-C3, UI-R-C3, UI-R-C3) was constructed as follows: PCRamplified cloridin of a clone within themixture. The subtracted library of origin of a clone within themixture. The subtracted library of origin of a clone within themixture as follows: PCRamplified cloridin of a clone within themixture in a hybridization with the UI-R-C3 library in the form of single-stranded circles and been derived was used as a driver in a hybridization with the UI-R-C2P library in the form of single-stranded circles and clone and subtracted into DH10B bacteriae (LifeTechnologies) to generate the UI-R-C3 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6:791-206, 1996, 240 248 300 121 CTTCCGGCAGGATCTAGGCTGGAAATGGGTCCACGAACCTAAGGGTTACTATGCCAACTT 180 0; Gaps 68 cttccgacaggatctgggctggaagtgggtccatgaacctaagggctactatgccaactt 9 caccaattactgcttccgcaacttggaggagaactgctgtgtgggcccctctacattga ctgctcaggcccttgcccatacctccgcagtgcagacacaaccacagcacggtgctggg DB 150; Length 503; Score 286.2; DB 150; Lengt Pred. 3']; double-stranded cDNA was ligated to Eco RI adaptors RATTCGGATCCTTG], digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library constructed by Bob Barstead. The C2C12 cell line (available from ATCC, catalog # CRL-1772) differentiates rapidly, forming contractile myotubes and producing characteristic muscle proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 (bases 1 to 530)

Vector: pCMVSPORT6; Two human lenses from different adults (both approximately 40 years old) together yielded 20ug of total RNA and 150ng mRNA for CDNA library synthesis. A directionally cloned CDNA library in the pCMVSPORT6 vector was constructed at Life Technologies, essentially following the protocols of the SuperScript Plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pGACTAGTTCTAGATCGCGAGCGCCC(7)15-3']. Not I/blunt end inserts were cloned into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the contained where cloned into the Not I/ECOR V sites in the conta

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from a pool of 5,000 clones made from the same library (cloneIDs 985608-986759, 1101195-1101959, and 1217928-1220615).
